RAVNEET PAHWA

OVERVIEW

- Data Analytics professional with 16+ years of experience delivering healthcare and life sciences BI solutions through Power BI, SQL Server, and Alteryx. Skilled in translating complex claims, membership, and provider data into actionable KPIs across clinical, operational, and financial functions. Strong background in data modeling, healthcare data governance, and performance reporting for payer and provider organizations.
- Effective communication skills to work effectively with stakeholders and team members.
- An effective leader with excellent analytical and quantitative skills, quick grasp, and good interpersonal skills are an added advantage along with technical knowledge.
- Agile and Adaptable, a quick learner and can learn new business processes, tools & concepts within a very short duration.
- Experience in Life Sciences (Commercial Operations/Analytics, Managed Markets, Market Access, Pricing, Medical Affairs, Clinical Operations, Regulatory Affairs)
- Experience in Healthcare (Provider, Payer, Member, Claims, Enrollment, Encounters, Assessments, Medicaid and Medicare)
- Expertise in CRM Datasets: Call Activity, Vouchers & Samples, Alignments, Segmentation and Targeting.
- Technical Expertise in Power BI Suite (Desktop and Report Builder: Paginated Reports), Tableau 2022.2 onwards, Workday Reporting, Qlik, AWS technology stack, Google Cloud, Azure, IBM Cognos, Cognos TM1, UNIX, AWS Redshift, PL/SQL, MySQL, Oracle 9i/10g/11g, DataStage and Informatica.
- Promote, prioritize, and evolve business processes, policies, and standards that promote governance through the Customer data lifecycle (end-to-end).
- Participated in strategy, design, implementation, and maintenance of data governance to ensure data integrity and standardization of Customer data across the enterprise.
- Excellent Knowledge in Data Warehousing Concepts, building round up Data Warehouse and implementing BI solutions.
- Expertise in Data Modeling, Designing Consumption layer, BI Data Model, and Designing dashboards for BI implementations.
- **Tableau Desktop Certified Associate Professional.**
- **Microsoft PowerBI Data Analyst Certified. (PL-300 exam)**
- Designed **dimensional models (star schema)** and semantic layers consumed by Power BI; created reusable DAX measures and relationships optimized for SQL Server-backed datasets.
- Strong Enterprise Data Warehouse and OLAP skills using BI Technologies.
- Utilized Best Practices and Proven Methodology in modeling data, ETL and BI development
- Excellent written, verbal and inter-personal and stakeholder communication skills.

TECHNICAL PROFICIENCIES

- Reporting Tool: Microsoft Power BI Suite, Power APPS, Power automate, Domo, Tableau 2022.2, Tableau Prep, Tableau Bridge, Workday Enterprise Interface Builder (EIB), Workday Studio, Workday Report Writer and iLoad, Qlik, CognosTM1, Cognos 11/10, Framework Manager, SAS, TIBCO Spotfire,
- ETL Tool: DataStage Server 7.5.1, Informatica PowerCenter, Matillion and Alteryx.
- Databases: SQL Server, Oracle, Redshift, Snowflake, Databricks.
- Data Modeling: Dimensional Data Modeling, Star Schema Modeling, Snowflake Modeling, FACT and Dimensions Tables, Conceptual, Physical and Logical Data Modeling
- Programming Language: SQL, PL/SQL, UNIX Shell Scripting, DB2
- Change Managements: Github, VSS, Truechange
- Ticketing Tools: Test Track Pro, Remedy, Clarity, ALM, Jira
- MS Office: Access, Excel, Word, PowerPoint
- Operating Systems: UNIX, MS Windows 98/2000/XP/2003 Server
- WebLogic Tool: CONTROL-M Enterprise Edition
- Other Utilities: Toad, SQL Navigator

PROFESSIONAL EXPERIENCE

Client – Kaiser Permanente, San Diego, CA
Role: Sr. PowerBI Consultant

01/2025 – Present

- Partnered with business and provider operations teams to design and document BI reference architecture that aligned analytical models with provider credentialing, contracting, and value-based care initiatives.
- Collaborated with the Commercial Data Hub (CDH) team to integrate provider, claims, and demographic data into the BI consumption layer, ensuring consistency and scalability across healthcare analytics solutions.
- Designed and developed Power BI dashboards with drill-down capabilities, enabling users to analyze provider performance, credentialing timelines, and contract tier participation at both network and individual levels.
- Led migration of enterprise Tableau dashboards and reports to Power BI, ensuring functional equivalence, improved usability, and optimized performance.
- Analyzed existing Tableau workbooks, data sources, calculated fields, parameters, filters, and dashboard logic to translate business requirements into Power BI solutions.
- Recreated Tableau calculations, KPIs, parameters, and business rules using DAX, Power Query, and Power BI semantic models.
- Performed side-by-side validation between Tableau and Power BI reports to ensure data accuracy, KPI consistency, and successful migration outcomes.
- Designed reusable Power BI semantic models and shared datasets to support multiple reports while maintaining consistent business definitions and governance standards.
- Developed interactive Power BI dashboards utilizing Drill-through, Bookmarks, Field Parameters, Dynamic Measures, Calculated Columns, and advanced DAX calculations.
- Connected Power BI reports to Snowflake and healthcare data sources, supporting clinical, claims, patient, provider, and operational analytics.
- Built and optimized star-schema data models, improving report performance, scalability, and refresh efficiency for large healthcare datasets.
- Implemented Incremental Refresh, Row-Level Security (RLS), and workspace security to support enterprise reporting and regulatory compliance requirements.
- Developed Power BI Dataflows and reusable data assets to streamline data preparation and

c: 973 216 1608
e: ravneet.pahwa@gmail.com

improve reporting consistency across multiple business areas.

- Utilized SQL and Alteryx workflows to transform, validate, and reconcile provider datasets across systems such as Snowflake and SQL Server, ensuring complete data lineage and accuracy.
- Created Alteryx data pipelines for provider network segmentation, demographic analysis, and contract value tracking, streamlining ingestion and automating data refresh processes.
- Led data profiling and business discovery sessions to identify gaps in provider data (e.g., missing NPI, credentialing status, or affiliation mismatches) and worked with teams to establish quality controls.
- Developed and maintained Microsoft Fabric Data Factory pipelines to ingest, transform, and orchestrate data from Databricks source systems into OneLake for reporting and analytics.
- Created governed semantic models and Power BI reports on top of Fabric SQL Endpoints and Lakehouse datasets.
- Monitored and troubleshooted Fabric pipeline executions, ensuring data quality, reliability, and timely availability of analytics datasets
- Optimized Power BI queries and underlying SQL views to improve dashboard refresh performance and reliability, particularly for high-volume provider and claims datasets.
- Provided technical and analytical guidance to business stakeholders and BI teams on best practices in data modeling, governance, and visualization within Power BI and Alteryx ecosystems.
- Enabled cross-functional teams, including Sales and Provider Network teams, to leverage BI tools for operational transparency and strategic decision-making.

Client - HealthFirst, NY

01/2024 – 012/2024

Role: Sr. PowerBI/Data Analyst

- Built and maintained provider and claims data models by integrating multiple healthcare data sources (credentialing, contracting, and demographic files) to ensure accuracy, consistency, and reliability for enterprise analytics.
- Designed and delivered Power BI dashboards with drill-down and hierarchy-based navigation, enabling provider relations, contracting, and clinical teams to analyze network performance, credentialing timelines, and value-based metrics.
- Developed and optimized Power BI data models, DAX measures, and semantic layers for provider and membership reporting, supporting both self-service analytics and executive KPIs.
- Leveraged SQL Server and Alteryx to clean, transform, and validate provider datasets—standardizing NPI, taxonomy, credentialing, and contract data across systems.
- Built Alteryx workflows for automating ETL processes, performing data profiling, and validating provider rosters to improve transparency and reconciliation across credentialing and contracting systems.
- Created dashboards tracking provider participation in value-based programs, cost-of-care, and quality performance, allowing drill-through into provider-level or facility-level details.
- Implemented row-level security (RLS) and workspace governance in Power BI to protect PHI and ensure data access by role and provider hierarchy.
- Automated recurring provider and clinical reports using Power BI Service refresh schedules integrated with Alteryx pipelines, improving timeliness and reducing manual effort.
- Partnered with business stakeholders to define provider KPIs, interpret data from credentialing and claims systems, and deliver actionable insights that enhance provider network management.
- Drove Power BI adoption across cross-functional teams through training and self-service

enablement, empowering teams to explore provider data insights independently.

Client – Novartis Pharmaceuticals, Whippany NJ
Role: Sr. Power BI Consultant

09/2023 – 12/2023

- Partnered with cross-functional teams to define KPIs and build provider performance dashboards in Power BI, enabling analysis of credentialing, contracting, and value-based provider networks.
- Designed scalable ER and dimensional data models integrating provider, claims, and demographic datasets, improving reporting consistency across healthcare operations.
- Developed drill-down dashboards that allowed users to explore provider-level metrics by specialty, region, and value-based contract tier, enhancing visibility into network efficiency and care outcomes.
- Leveraged SQL Server and Alteryx to clean, transform, and join provider datasets from multiple sources, ensuring accuracy and timely ingestion into Power BI semantic models.
- Created reusable Power Query and DAX measures to calculate provider performance indicators such as panel size, credentialing status, contract compliance, and quality metrics.
- Collaborated with Provider Relations and Data Engineering teams to validate credentialing and contracting data, resolving integrity issues and standardizing source-to-report mappings.
- Implemented data validation, error handling, and quality checks across ETL layers to maintain accuracy and traceability within the reporting ecosystem.
- Delivered end-to-end BI solutions — from requirements gathering and data modeling to visualization, UAT, and production deployment — ensuring stakeholder alignment at every phase.
- Established governance and CI/CD processes for consistent, governed data delivery across healthcare analytics projects.
- Championed a data-driven culture by translating provider data insights into actionable recommendations supporting network optimization and operational decision-making.

Client – Blue Cross Blue Shield – Anthem, CA
Role: Power BI Lead

03/2023 – 08/2023

- Led a cross-functional BI team in designing and delivering enterprise-grade Power BI dashboards and analytical models for 500+ users across clinical, provider, and operational domains.
- Developed and optimized Power BI data models and SQL/Alteryx workflows to integrate multiple healthcare datasets including provider, claims, credentialing, and contracting data.
- Designed provider network performance dashboards with drill-down and hierarchy-based views, enabling leadership to analyze provider quality, utilization, and value-based performance metrics.
- Worked extensively with provider operations data, incorporating attributes such as NPI, taxonomy, credentialing status, contracting tier, demographics, and provider affiliations into the analytical layer.
- Partnered with Provider Relations and Network Operations teams to validate provider rosters, resolve data integrity issues, and ensure accurate alignment between contracted and credentialed provider datasets.
- Built end-to-end data pipelines — from ingestion to visualization — leveraging SQL Server, Snowflake, and Alteryx to automate transformations and ensure data quality across Dev, QA, and Prod environments.

c: 973 216 1608
e: ravneet.pahwa@gmail.com

- Migrated legacy Tableau reports to Power BI, optimizing queries and DAX logic to improve performance and interactivity.
- Implemented data governance and RLS (Row-Level Security) to ensure accuracy, transparency, and compliance with healthcare privacy standards.
- Integrated Power BI dashboards into SharePoint (SSO embedded access) to streamline availability for business and executive users.
- Delivered patient and provider experience dashboards using data from Epic EHR/EMR systems, visualizing care patterns, satisfaction, and provider outcomes.
- Provided technical and analytical guidance to onsite and offshore development teams, ensuring adherence to best practices and BI architecture standards.

Client –Ultragenyx Pharmaceutical, Brisbane CA

06/2022 – 02/2023

Role: Power BI Specialist

- Payer – claims analytics executive dashboard building key performance indicators for the overall payer wise claims marrying the data with the providers details w.r.t territories wise segregation.
- Experience of healthcare, value-based reimbursement, and Commercial payer lines of business.
- Enable Payer specialist by providing integrated data from various sources.
- Responsible for Data Modeling, Designing Consumption layer, PowerBI data Model, and Designing dashboards with providing technical and analytical guidance for PowerBI onsite and offshore development teams.
- Transforming data using Informatica PowerCenter and Alteryx.
- Responsible for translating Functional Specs to Technical specs for planning and development.
- Migrating Tableau dashboards to PowerBI. Optimizing view definition queries for better performance, along with re-visiting Dax statements within PowerBI.
- Troubleshoot the performance issues and implemented solutions for the improvement.
- Code Reviews to make sure the best practices are implemented.
- End to End delivery from Conception to Prod Release and hyper care support.

Client – Insurance Company of the West (ICW) Group Holdings

Role: PowerBI Lead

06/2021 -05/2022

- Spearhead the Solution design, Data Modeling and ETL development for our data marts using different technologies such as Snowflake and SQL Server.
- Developed KPIs to measure team's pipelines efficiency, as well as defining coding standards and best development practices.
- SME for P&C (Property and Casualty) Insurance claims for personal and commercial line of business.
- Build dashboards and visualizations to review claims and status updates to ensure that claims are valid. Build KPI's for coverage positions, reserves are adequately set, and that the claim files are moving towards closure or resolution in a timely manner.
- Builds dashboards for various personas like claims professionals, clients and internal staff for them to achieve successful results.
- Lead efforts to develop and maintain the architectural assets for the data domain including current and target state data architectures.
- Provides strategic recommendations to maximize the value of enterprise data assets, including the external data ecosystem through data exploitation, envisioning data-enabled strategies and enabling business outcomes through analytics, data and analytics governance, and enterprise information policy.

c: 973 216 1608
e: ravneet.pahwa@gmail.com

- Lead efforts to improve business performance through enterprise data solutions and capabilities, such as master data management, metadata management, analytics, content management, data wrangling/integration, and related data management or data infrastructure components.
- Ensures data solutions are in alignment with data architecture principles and target state.
- Oversees end-to-end data asset lifecycle management activities.
- Evaluates and recommends emerging technologies for data management, storage and analytics.
- Assists data and analytics leaders, and business and IT leadership in developing data strategy, and governance processes and structures.
- Developing and advocating standardized data modeling & metadata management methodologies, standards, and processes across the enterprise.
- Designing data warehousing (DW) solutions.
- Researching, designing & documenting new data structures – Conceptual, Logical, Physical.
- Capture & Communicate Business Rules and Glossary information.
- Facilitate, promote, and develop Data Governance/Management program.
- Collaborate with multiple departments to establish standards and policies to ensure enterprise information assets are properly secured, protected by appropriate access management and privacy controls.
- Researching Data Quality issues, analysis and providing solutions while corroborating with other leaders.
- Assist in managing large complex projects and delegating tasks to project team members and external contractors, where necessary.
- Act as a high-level technical expert in addressing data-related problems of systems integration, compatibility, and multiple-platform.
- Understanding and documenting current state data assets – Reverse Engineering, Data Analysis.
- Function as an enterprise-wide technical leader, providing coaching, education and career development to staff, as appropriate.

Client - Pharmacyclics, an AbbVie Company

08/2019 – 05/2021

Role: Power BI Lead/Developer

- Developer for building BI solutions for Field Rep on Mobile Platform for 500+ users.
- Provided technical and analytical guidance for PowerBI design and development.
- Responsible for translating Functional Specs to Technical specs for planning and development.
- Troubleshoot the performance issues and implemented the solutions for the improvement.
- Actively working with the data team to transform data as per the BI requirements.

Client - Johnson and Johnson, NJ

05/2017 – 10/2019

- Model N Custom Report Development for Commercial, GP and Medicaid.
- Hands on and provided technical and analytical guidance for Tableau, Cognos and Oracle PL/SQL and Informatica Powercenter.
- Reports developed based on Agile Methodology (JIRA).
- Responsible for translating Functional Specs to Technical specs for planning and

development.

- Following the SDCL cycle from Report Development, Supporting Testing Team to UAT.

Client - Blue Cross Blue Shield - Michigan

01/2015 – 04/2017

- Supported and Updated Renewal Packages based on the Compliance needs.
- Team leads for Reports development and Maintenance for the Tableau dashboards.
- Trained other team members on Agile Methodology and create competencies for various BI Tools (Tableau/Qlik/Spotfire)
- Provided Service Focused inputs to the end Customer.

Client - InterMune Pharmaceuticals Inc.

07/2014 – 11/2014

- QlikView Application Development for over 80 different reports for Sales Rep, District Manager and Regional Managers
- Involved in requirement gathering and analysis development specification documents.
- Phased wise approach for the Reporting needs for this project.
- Data Modelling based upon the 3 Phased Report developments.
- Setting up the QlikView environment and security to the different users in the hierarchy
- User workshops for report acceptance.

Client - Almac Group Pharmaceuticals

04/2014 – 06/2014

- IBM Cognos Upgrade from 8.4 suite to 10.2.1
- Single handedly completed the system health and installation of the entire IBM Cognos upgrade
- Hardware recommendations and Software Installation time measurement to reduce the impact to the business and users
- Documenting the entire process with multiple test environment installations
- Test cases creation for the QA to test the Reports and environment after the upgrade
- Migration issues were resolved working with IBM

Client - Allergan

12/2013 – 03/2014

- Alert Processes created for the Neuroscience and Medical domains
- Bursting and Scheduling of the Reports to the end users
- Development of Reports Studio reports for the Alerts creation
- Provided Technical support to resolve critical and emergency issues and suggested best practices with regard to design and development
- Troubleshoot the performance issues and implemented the solutions for the improvement
- Cognos PowerPlay Cube creation and maintenance process implemented automatically
- Supported the environment for the full two cycles after production release for any critical issues
 - o The operating model for this project was based on Agile Methodology
- Tested the entire model based on the test scenarios and test cases created with all the details
- Data Validation for cube output when compared to the database tables

**Business Analyst/Sr. Cognos BI Specialist,
HORIZON Blue Cross Blue Shield of New Jersey
11/2013**

12/2012 –

- Involved in requirement gathering and analysis development specification documents
- Created a Dynamic Reports to show the Deficiency Reporting for the business users
- Reports will automatically send a notification to the users upon the Deficiency, attaching the report output in form of .mht files
- Supporting and helping to resolve any business user questions, data validation inquiries and enhance existing analytics and reports
- Interactive Reports created for the new Reports implemented
- Troubleshoot Business Intelligence Reporting Issues at various phases (Production, Test, Development)
- Unit testing, System Testing and analysis of the modified code for verifying the efficacy and correctness of the implemented code
- Created models in Framework Manager and cubes in Transformer using various data sources
- Setting up the security in frame work manager at package level, Query subject level
- Created the indexing for the Cognos content and scheduled for the incremental updates

Sr. Cognos BI Specialist, Novartis Pharma

05/2012-11/2012

- Worked with the business users, obtaining the business requirements and translating the same into technical requirements and design to develop new analytics and reports
- Supported and helped resolve any business user questions, data validation inquiries and enhance existing analytics and reports
- Interactive Reports created for the new Reports implemented
- Troubleshoot Business Intelligence Reporting Issues at various phases (Production, Test, Development)
- Build TM1 based systems/models/cubes to support the OPEX Forecasting and Reporting process.
- Created a project plan for any new software change requests and tracking the status of the planned tasks to completion as per the project plan
- Analyzed business requirements and proposing modifications to the existing processes to incorporate any new report enhancements
- Unit testing, System Testing and analysis of the modified code for verifying the efficacy and correctness of the implemented code
- Created models in Framework Manager and cubes in Transformer using various data sources
- Set up the security in frame work manager at package level, Query subject level
- Created the indexing for the Cognos content and scheduled for the incremental updates
- Tested the load balancing of the gateway servers
- Tested the Primary and Secondary Content manager servers for the fail over situations
- Created Ad-Hoc reports for the business users using Query studio
- Created different type of reports like Drill through, Master Detail, Cross tab reports by using Report Studio.

Onsite Lead, Novartis Pharma

01/12-05/12

- The Novartis Pharmaceutical Corp. (NPC)'s "OneIT" aspiration is to be the preferred consultative business innovators and technologists for Novartis, and the partner of choice for value added, technology enabled solutions and services. As a result, NPC's Application Management and Delivery (AMD) group has embarked on a journey to develop and implement an operating model based on standardized processes for improved effectiveness, quality and innovation
- The operating model is based on ITIL (IT Infrastructure Library) – an industry standard and set of good practices for IT service management (ITSM) that strives to align IT with business, reduce costs and maintain and improve quality of service provided by IT
- Cognizant has collaborated Novartis AMD group in achieving its "OneIT" vision and objectives. Cognizant's operating model is a service-oriented model based on ITIL aimed at consistent delivery of services through common processes and standards

Cognos BI Developer/Architect, Novartis Pharma

12/2010-12/2011

- Team lead for CDW Application Operation support. Involved in CDW Operation support activities such as maintaining ETL/BI process on daily basis, resolving production incident effectively, update the client with resolved Production incident and ad-hoc request
- Planning and execution for data load activities based on source system data deliverables and downstream system data requirement during the production cycle. Deliver data to Business team without delay
- Managed and tracked the Release and Change Management for the changes done for Production incident Fix and Ad-hoc Request changes come from client facing team. Prepare plan for change control and Rollback process
- Provided Data warehouse Architectural solution for new process implementation
- Provided Technical support to resolve critical and emergency issues and suggests best practices with regard to design and development
- Periodic health checkup of UNIX server, taking backup of DataStage projects and resolve DataStage admin related issues such as unlocking job
- Troubleshooting performance issues and provides solution to improve the performance slow running production process
- Distributed work to offshore team and manage the offshore team
- Coordinated with offshore team to conduct testing the production jobs in new test environment during Server migration and accomplish migration activities without production cycle downtime
- Developed the Dashboard reports using MDX Functions
- Developed Reports in Query Studio for ad-hoc reporting and trained end users effectively to use the reporting tool, to build and customize the developed reports
- Performance tuning by analyzing and comparing the turnaround times between SQL and Cognos.
- Worked with Analysis Studio to develop multi-dimensional reporting
- Coded and implemented PL/SQL packages

Cognos, BI/ETL Lead, Novartis Pharma

09/08-11/10

- Operation support activities such as maintaining ETL process on daily basis, resolving production incident effectively, update the client with resolved Production.
- Designed, developed, performed enhancements, tested, deployed, and maintained SAS programs, UNIX Shell scripts and Oracle procedures for supporting various applications (e.g. InfoOne, Direct Access) within the Sales and marketing SAS data mart supported by

the client's Data warehousing and Business Intelligence group.

- Created, validated and performed quality checks on weekly, semi-monthly and monthly suite of production reports on a cyclical basis. Coordinated managed distribution of reports to field representatives.
- Identified innovative process improvement and optimization techniques to reduce processing time of production processes and improved process performance using parallel processing (multithreading) in SAS, using hash for summarization and alternative data lookup methods.
- Supported and assisted in resolving any business user's questions, data validation inquiries and any ad hoc analysis (e.g. impact of addition of new product on reporting) in any of the supported applications on the SAS data mart.
- Performed project management, planning and tracking project tasks to completion. Performed nit testing, System Integration Testing and Regression testing on modified SAS processes on the SAS data mart and validated outputs.
- Managed Test Plan creation, Unit Test cases and System test cases for the corresponding software change request. Performed ad hoc analysis, created ad hoc reports for new system change requests on SAS data mart.
- Performed defect prevention, defect tracking, change management and quality control using tools such as Seapine Test track pro, Prolite and MS Visual Source Safe.

Cognos BI Developer, Merck

07/07-08/08

- Responsible for gathering requirement from onsite coordinator and client
- Handled complex Report Development management involved in project
- Strictly following the clients coding standards and testing the same
- Reported to Project Manager for development status of Project

Cognos BI Developer, Merck

11/06-06/07

- Responsible for gathering requirement from onsite coordinator and client and present the same to development team
- Involved in planning and scoping of modules
- Handled complex Report Development management involved in project and also creation of metadata model and design specification for the same
- Involved in the report design with strictly following the clients coding standards and testing the same
- Unit testing of the reports developed
- Reported to Project Manager for development status of Project

Cognos Technical Analyst, Johnson & Johnson Archimedes

06/06-10/06

- Prepared design documents
- Communicated with the onsite team
- Developed reports
- Modification of package using framework manager
- Unit testing of reports developed

CERTIFICATIONS

- **Tableau Desktop 10 Qualified Associate Certified**

c: 973 216 1608
e: ravneet.pahwa@gmail.com

- IBM Certified Solution Developer – InfoSphere DataStage v8.5
- **IBM Cognos Certified BI** Author.
- Model N Commercial Business and Project Track Course
- Model N Medicaid and GP Training
- Managed Services ITIL Certified
- Certification in Brain Bench Courses.
- Certified in IBM Cognos ReportNet
- Cognizant Certified Professional (CCP) for 'Data warehousing' awarded by Cognizant Academy
- Cognizant Certified Professional (CCP) for 'Oracle' awarded by Cognizant Academy

EDUCATION

Bachelors of Engineering, National Institute of Technology Jalandhar
